

# Smartair™ Standalone

**ASSA**<sup>®</sup>  
ASSA ABLOY

## Proximity access control

Smartair™ Standalone offers convenience and high security in a system which is simple to install and use.

# Smartair™ Standalone

Proximity access control

For entry level security, Smartair™ Standalone offers simple proximity access control. Suitable for small installations up to three doors and 25 users.

## Proximity system

Using Smartair™ is as simple as holding your card or tag up to the reader to allow access. The action is contactless so wear and tear are reduced to a minimum.

## High security

The strong encryption of a smartcard system is combined with the physical security of an ASSA Modular, Connect or Vachette DIN lockcase.

## Attractive design

The elegant slimline looks of Smartair™ use return to door handles to complement the requirements of Doc M and BS 8300.

## Simple installation

The battery-powered Smartair™ units require no expensive cabling, may be retrofitted to existing doors and are easy to set up and use.

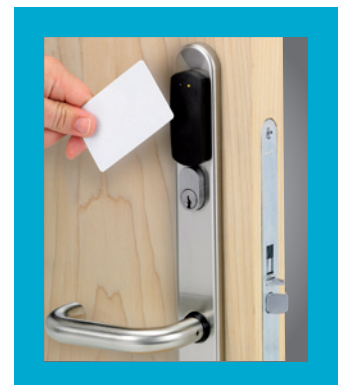

## Easy to set up

Smartair™ Standalone requires only a single programming card to add, delete or amend users. Optional shadow cards can also delete card users one-by-one.

Installing a system requires the Smartair™ unit, a lockcase such as the Connect 340, and a Starter Kit which includes a programming card and 25 user cards.

We also offer fully programmable Smartair™ systems with calendars, time zones, audit trails and offline or wireless updating. Please ask for a brochure!

Smartair™ uses 1K Mifare smartcards as standard.

Requires three AAA LR03 1.5V batteries: estimated battery life over 20,000 operations.

1. Open program mode

2. Program user card

3. Close program mode
