Application

ASSA CLIQ Remote provides advanced security and convenient access to web-based management software.

CLIQ Web Manager provides a central administration, programming and management of the CLIQ Remote locking system in combination with a CLIQ programming terminal and a Microsoft Windows-based PC or tablet. Access rights for user keys can then be distributed through network connected updating devices.

ASSA follow the requirements and standards in a process of secure data management of the end customer's lock system. Administration of locks and keys require physical access to the master programming key and PIN-code to perform programming tasks, in addition the software is protected with SSL certificate authentication. This procedure guarantees high system security.

Features

- Convenient management of CLIQ Remote locks and keys
- Access at a distance
- Time restrictions
- Automatic key cloning
- Key revalidation
- Easy extension of the locking system
- Blocking of lost keys
- Audit trail reports
- E-mail communication with users
- Central management
- 24/7 uptime as Software as a Service (SaaS)
- Admin domains
- Customizable admin roles
- Easy installation in the web-browser
- Automatic backup and updates
- User friendly Graphical User Interface (GUI)

CLIQ Web Manager

Cloud administration software

CLIQ Remote lock system

Central administration is one of the core benefits with CLIQ Web Manager. Especially for geographically dispersed systems where the administrator can change access rights on keys without having to bring them in.

- Keys and locks are easily overviewed and searched
- Overdue keys can be blocked from access
- Hand in/out receipts can be printed

Administration on multiple platforms

Scan the code for a video demonstration

Tags

For improved search ability content in the lock system can be tagged with information e.g.

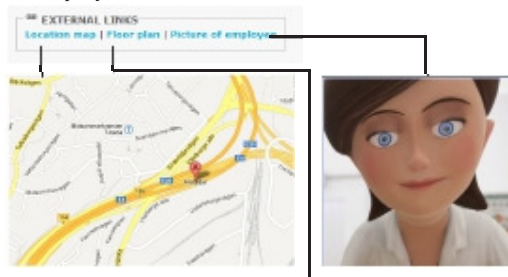

- Department
- City

External links

This can be applied to point to selected web addresses to:

- Show a map where the cylinder is placed
- A photograph of the employees from a photo database
- Floor Plan with the cylinder positions for the facility or company

E-mail server

CLIQ Web Manager automatically sends out email to key holders in the system with:

- Permissions and schedule
- Prompt to return the key
- Reminder to synchronize the key

Access profiles

Access profiles are a valuable function when administrating large systems. With access profiles, you can connect certain cylinders to a profile once, and when handing out a key to an employee or visitor with this profile, this person will automatically have access to all cylinders given in the access profile.

Audit trail

A central audit trail archive allows for easy overview of what happens in the lock system. The logs are synced automatically when keys are updated by the user.

23/01/13 14:55	Erik Johansson	Access	Granted
25/01/13 14:23	Erik Johansson	No Command	Denied

CLIQ Web Manager System requirements

- Client operating system:
 - Microsoft Windows XP SP3, Vista, 7, 8
- Virtual environments: Citrix, VMware
- Hand-held devices: Windows Tablet Surface Pro /2
- Client Internet browser:
 - Microsoft Windows Explorer 8, 9, 10 \geq
 - Mozilla Fire Fox 32bit 16.0 \geq
- Client application Oracle Java 7.45 32bit \geq
- Client login verification with Programming Key and PIN code

CLIQ Web Manager Server

- Server management According to: ISO27001 Security Management System, ISMS - Requirements
- Service availability: 24/7
- Maintenance break: HA -High Availability solution
- Client server communication: SLL secured web service connection (TCP port 443)

CLIQ Remote locking system capacity

- Amount of cylinder groups per locking system: 65 000
- Amount of key owners per locking system: Unlimited
- Amount of administration domains per system: Unlimited
- Amount of administrators per locking system: 1000 \geq
- Lock audit trail capacity: 1000 latest events
- Key audit trail capacity: 100 latest events
- System event log archive capacity: Unlimited
